

HDMI Companion Chip with I²C Level Shifting Buffer, 12 Channel ESD, and Current-Limit Load Switch

Check for Samples: [TPD12S016](#)

FEATURES

- Confirms to HDMI Compliance Tests without any External Components
- Supports HDMI1.4 Data Rate
- Match Class D and Class C Pin Mapping
- 8-Channel ESD Lines for Four Differential Pairs with Ultra-low Differential Capacitance Matching (0.05pF)
- On-chip Load Switch with 55mA Current Limit Feature at the HDMI 5V_OUT Pin
- Auto-direction Sensing I²C Level Shifter with One-shot Circuit to Drive Long HDMI Cable (750pF Load)
- Back-drive Protection on HDMI Connector Side Ports

- Integrated Pull-up and Pull-down Resistors per HDMI Specification
- ±8KV Contact Discharge Rating at all External Pins
- Space Saving 24-pin RKT Package and 24-TSSOP Package

APPLICATIONS

- Cell Phones
- eBook
- Portable Media Players
- Set-top Box

DESCRIPTION

The TPD12S016 is a single-chip HDMI interface device with auto-direction sensing I²C voltage level shift buffers, load switch, and integrated high-speed ESD protection clamps. The device pin mapping matches the HDMI Type D connector with four differential pairs. This device offers eight low-capacitance ESD clamps, allowing HDMI 1.4 data rates. The integrated ESD circuits provide good matching between each differential signal pair, which allows an advantage over discrete ESD solutions where variations between ESD protection clamps degrade the differential signal quality. The TPD12S016 provides a current limited 5 V output (5V_OUT) for sourcing the HDMI power line. The current limited 5 V output supplies up to 55 mA to the HDMI receiver. The control of 5V_OUT and the hot plug detect (HPD) circuitry is independent of the LS_OE control signal, and is controlled by the CT_HPDP pin. This independent CT_HPDP control enables the detection scheme (5V_OUT and HPD) to be active before enabling the HDMI link. An internal 3.3V node powers the CEC pin eliminating the need for a 3.3V supply on board.

The TPD12S016 integrates all the external termination resistors at the HPD, CEC, SCL, and SDA lines. There are three non-inverting bi-directional translation circuits for the SDA, SCL, and CEC lines. Each have a common power rail (VCCA) on the A side from 1.1 V to 3.6V. On the B side, the SCL_B and SDA_B each have an internal 1.75 kΩ pull up connected to the 5 V rail (5V_OUT). The SCL and SDA pins meet the I²C specification and drive up to 750 pF capacitive loads exceeding the HDMI1.4 specifications. The CEC_B pin has an internal 27 kΩ pull up to the internal 3.3 V supply rail. The HPD_B port has a glitch filter to avoid false detection due to plug bouncing during the HDMI connector insertion.

The TPD12S016 offers reverse current block feature at the 5V_OUT pin. In the fault conditions, such as when two HDMI transmitters connect to the same HDMI cable, the TPD12S016 ensures that the system is safe from powering up through external HDMI transmitter. The Dx, CLKx, SCL_B, SDA_B, CEC_B pins also feature reverse-current blocking when the system is powered off.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

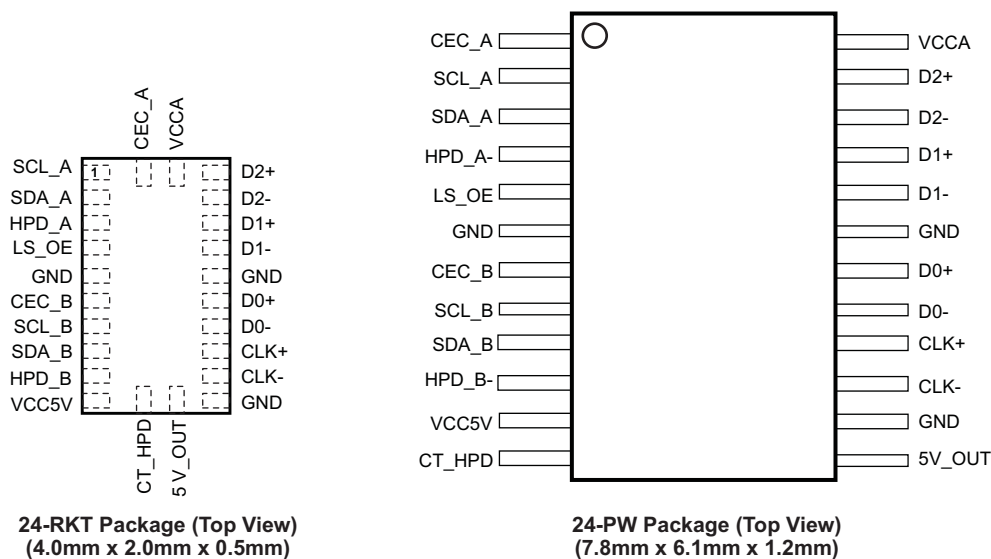

TPD12S016

SLLSE96D – SEPTEMBER 2011 – REVISED DECEMBER 2012

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

PACKAGE INFORMATION

APPLICATION INFORMATION

Application Case #1: HDMI Driver Chip is controlling the TPD12S016 via only one control line (CT_HPDA). In this mode the HPD_A to LS_OE pin are connected as shown in the oval dotted line of [Figure 1](#).

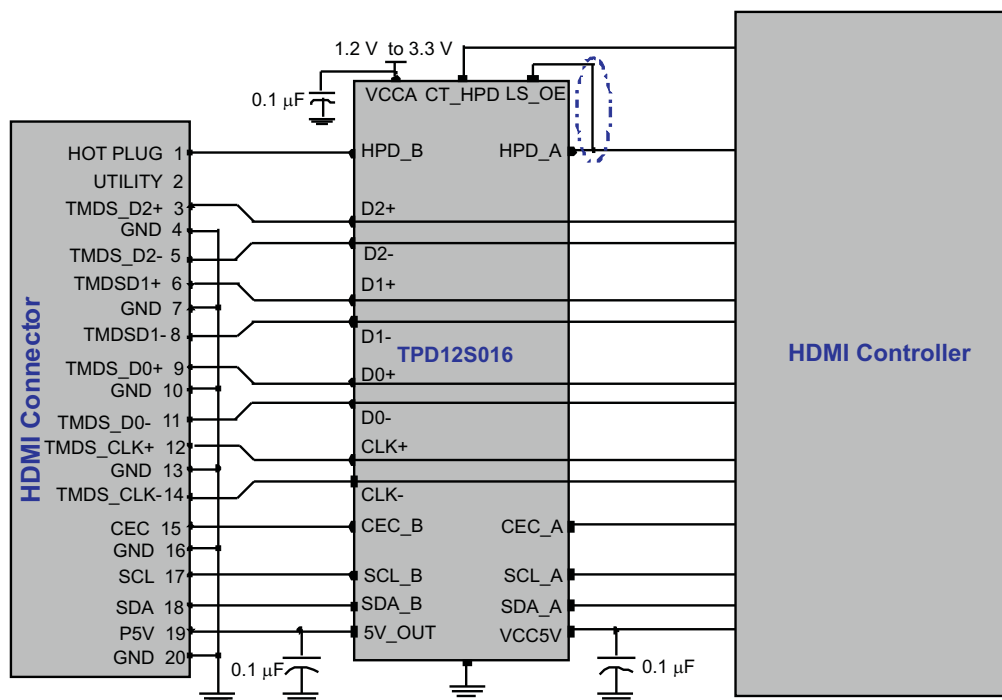

Figure 1. Application Schematics for HDMI Controllers with One GPIO for HDMI Interface Control

Application Case #2: Some HDMI driver chips may have two GPIOs to control the HDMI interface chip. In this case a flexible power saving mode can be implemented.

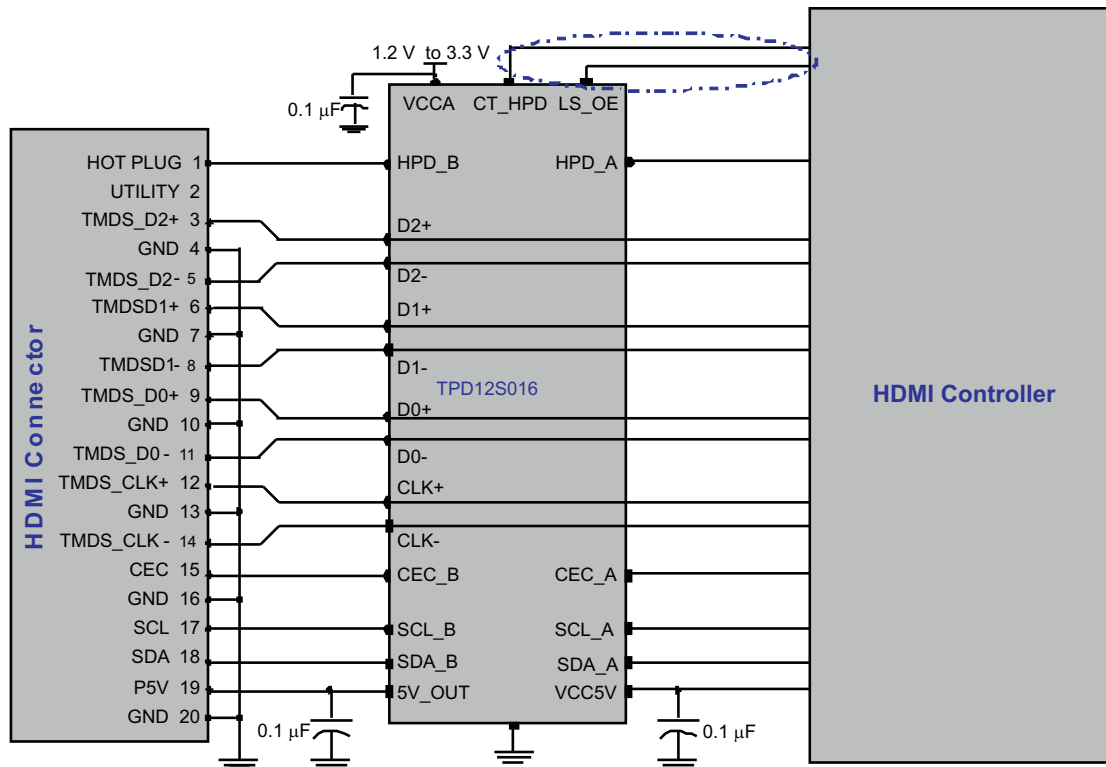

Figure 2. Application Schematics for HDMI Controllers with Two GPIOs for HDMI Interface Control

The LS_OE and CT_HPDP are active-high enable pins. They control the TPD12S016 power saving options according to the following table:

LS_OE	CT_HPDP	VCCA	VCC5V	A-side Pull-ups	DDC, B-Side Pull-ups	CEC_B Pull-ups	CEC LDO	Load SW and HPD	DDC/ CEC VLTs	ICCA Typ	ICC5V Typ	Comments
L	L	1.8V	5.0V	Off	Off	Off	Off	Off	Off	1 μA	1 μA	Fully Disabled
L	H	1.8V	5.0V	On	On	Off	Off	On	Off	1 μA	30 μA	Load Switch on
H	L	1.8V	5.0V	Off	Off	Off	Off	Off	Off	1 μA	1 μA	Not Valid State

CIRCUIT SCHEMATIC DIAGRAM

PIN FUNCTIONS

PIN			PIN TYPE	DESCRIPTION
NAME	RKT	PW		
D-, D+	16, 17, 19-22	17, 18, 20-23	ESD Terminal	HDMI TMDS Data. Connect to HDMI Controller and HDMI Connector directly.
CLK-, CLK+	14, 15	15, 16	ESD Terminal	HDMI TMDS Clock. Connect to HDMI Controller and HDMI Connector directly.
HPD_A	3	4	Output	Hot plug detect Output referenced to VCCA. Connect to HDMI controller Hot plug detect input pin
HPD_B	9	10	Input	Hot plug detect Input. Connect directly to HDMI Connector Hot Plug Detect pin
CEC_A	24	1	IO Port	HDMI controller side CEC signal pin referenced to VCCA. Connect to HDMI controller.
CEC_B	6	7	IO Port	HDMI connector side CEC signal pin referenced to internal 3.3V supply. Connect to HDMI connector CEC pin.
SCL_A	1	2	IO Port	HDMI controller side SCL signal pin referenced to VCCA. Connect to HDMI controller.
SCL_B	7	8	IO Port	HDMI connector side SCL signal pin referenced to 5V_OUT supply. Connect to HDMI connector SCL pin.
SDA_A	2	3	IO Port	HDMI controller side SDA signal pin referenced to VCCA. Connect to HDMI controller.
SDA_B	8	9	IO Port	HDMI connector side SDA signal pin referenced to 5V_OUT supply. Connect to HDMI connector SDA pin.
LS_OE	4	5	Control Input	Disables the Level shifters when OE =L. The OE pin is referenced to VCCA
CT_HPDP	11	12	Control Input	Disables the load switch and HPD_B when CT_HPDP =L. The CT_HPDP is referenced to VCCA
VCC5V	10	11	Input Power	Internal 5V Supply. (Input to the load swtch.)
VCCA	23	24	Input Power	Internal PCB Low Voltage Supply (Same as the HDMI Controller Chip Supply)
5V_OUT	12	13	Output Power	External 5V Supply. (Output of the load switch.)
GND	5, 13, 18	6, 14, 19	Ground	Connect to System Ground Plane

ABSOLUTE MAXIMUM RATINGS⁽¹⁾⁽²⁾

over operating free-air temperature range (unless otherwise noted)

			VALUE		UNIT
			MIN	MAX	
V _{CCA}	Supply voltage range		–0.3	4.0	V
V _{CC5V}	Supply voltage range		–0.3	6.0	V
V _I	Input voltage range ⁽²⁾	SCL_A, SDA_A, CEC_A	–0.3	4.0	V
		SCL_B, SDA_B, CEC_B	–0.3	6.0	
		CT_HPD, LS_OE	–0.3	4.0	
		D, CLK	–0.3	6.0	
V _O	Voltage range applied to any output in the high-impedance or power-off state ⁽²⁾	SCL_A, SDA_A, CEC_A, CT_HPD, LS_OE	–0.3	4.0	V
		SCL_B, SDA_B, CEC_B	–0.3	6.0	
V _O	Voltage range applied to any output in the high or low state ⁽²⁾⁽³⁾	SCL_A, SDA_A, CEC_A, CT_HPD, LS_OE	–0.3	V _{CCA} + 0.5	V
		SCL_B, SDA_B, CEC_B	–0.3	V _{CCB} + 0.5	
I _{IK}	Input clamp current	V _I < 0		–50	mA
I _{OK}	Output clamp current	V _O < 0		–50	mA
	Continuous current through V _{CCB} , or GND			±100	mA
T _{stg}	Storage temperature range		–65	150	°C

- (1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.
- (2) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (3) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS

over recommended operating free-air temperature range (unless otherwise noted)

				MIN	TYP	MAX	UNIT
V _{CCA}	Supply voltage			1.1		3.6	V
V _{CC5V}	Supply voltage			4.5		5.5	V
V _{IH}	High-level input voltage	SCL_A, SDA_A	V _{CCA} = 1.1V to 3.6 V	0.7×V _{CCA}		V _{CCA}	V
		CEC_A	V _{CCA} = 1.1V to 3.6 V	0.7×V _{CCA}		V _{CCA}	V
		CT_HPD, LS_OE	V _{CCA} = 1.1V to 3.6 V	1.0		V _{CCA}	V
		SCL_B, SDA_B	5V_OUT = 5.0 V	0.7×5V_OUT		5V_OUT	V
		CEC_B	5V_OUT = 5.0 V	0.7×V _{3P3} ⁽¹⁾		V _{3P3}	V
		HPD_B	5V_OUT = 5.0 V	2.0		5V_OUT	V
V _{IL}	Low-level input voltage	SCL_A, SDA_A	V _{CCA} = 1.1V to 3.6 V	–0.5		0.082×V _{CCA}	V
		CEC_A	V _{CCA} = 1.1V to 3.6 V	–0.5		0.082×V _{CCA}	V
		CT_HPD, LS_OE	V _{CCA} = 1.1V to 3.6 V	–0.5		0.4	V
		SCL_B, SDA_B	5V_OUT = 5.0 V	–0.5		0.3×5V_OUT	V
		CEC_B	5V_OUT = 5.0 V	–0.5		0.3×V _{3P3}	V
		HPD_B	5V_OUT = 5.0 V	0		0.8	V
V _{ILC}	(contention) Low-level input voltage	SCL_A, SDA_A, CEC_A	V _{CCA} = 1.1V to 3.6 V	–0.5		0.065×V _{CCA}	V
V _{OL} – V _{ILC}	Delta between V _{OL} and V _{ILC}	SCL_A, SDA_A, CEC_A	V _{CCA} = 1.1V to 3.6 V		0.1×V _{CCA}		mV
T _A	Operating free-air temperature			–40		85	°C

- (1) The V3P3 is an internal 3.3V power supply node. The V3P3 is generated from the 5V supply pin through the on-chip LDO.

ESD TABLE

PARAMETER	SIGNALS	TYP	UNIT
HBM ESD	LS_OE, CT_HPD, SCL_A, SDA_A, CEC_A, HPD_A, VCCA	±2	kV
	Dx, CLKx, SCL_B, SDA_B, CEC_B, HPD_B, 5V_OUT	±15	kV
IEC 61000-4-2 Contact Discharge	Dx, CLKx, SCL_B, SDA_B, CEC_B, HPD_B, 5V_OUT	±8	kV

ELECTRICAL CHARACTERISTICS

High Speed ESD Lines: Dx, CLKx

PARAMETER			TEST CONDITION		MIN	TYP	MAX	UNIT
I _{IO}	Current through ESD clamp ports		V _{CCA} = 3.3 V, V _{CC5V} = 5.0 V, V _{IO} = 3.3 V	D, CLK		0.01	0.5	μA
V _{DL}	Diode forward voltage		I _D = 8 mA	Lower clamp diode		0.8	1.0	V
R _{DYN}	Dynamic Resistance		I = 1 A	D, CLK		1		Ω
C _{IO}	IO capacitance	PW Package	V _{CC} = 5 V, V _{IO} = 2.5 V	D, CLK		1.0		pF
		RKT Package				1.2		
ΔC _{IO-TMDS}	Differential capacitance for the Dx+, Dx– lines		V _{CC} = 5 V, V _{IO} = 2.5 V	D, CLK		0.05		pF
V _{BR}	Break-down Voltage		I _{IO} = 1 mA		6.5		9	V

Load Switch VCC5V, 5V_OUT

PARAMETER		TEST CONDITION	MIN	TYP	MAX	UNIT
I_{CC5V}	Supply current at VCC5V	VCC5V = 5V, 5V_OUT = Open, LS_OE = GND, CT_HPDP = GND		1	45	μ A
	Supply current at VCC5V	VCC5V = 5V, 5V_OUT = Open, LS_OE = GND, CT_HPDP = 3.3V		4	50	μ A
I_{SC}	Short circuit current at 5V_OUT	VCC5V = 5V, 5V_OUT = GND	100	150	200	mA
V_{DROP}	5V_OUT output voltage drop	VCC5V = 5V, I_{5V_OUT} = 55 mA		35	50	mV
T_{ON}	Turn on Time, VCC5V to 5V_OUT	C_{LOAD} = 0.1 μ F, R_{LOAD} = 500 Ω		77		μ s
T_{OFF}	Turn off Time, VCC5V to 5V_OUT	C_{LOAD} = 0.1 μ F, R_{LOAD} = 500 Ω		7.0		μ s
T_{SHUT}	Thermal Shutdown	Shutdown threshold, TRIP ⁽¹⁾		140		$^{\circ}$ C
		HYST ⁽²⁾		12		

(1) The TPD12S016 turns off after the device temperature reaches the TRIP temperature.

(2) Once the thermal shut-down circuit turns off the load switch, the switch turns on again after the device junction temperature cools down to a temperature equals to or less than TRIP-HYST.

Figure 4. DDC Level Shifter Operation (B to A Direction)

Rise-Time Accelerators

The HDMI cable side of the DDC lines incorporates rise-time accelerators to support the high capacitive load on the HDMI cable side. The rise time accelerator boosts the cable side DDC signal independent of which side of the bus is releasing the signal.

Noise Considerations:

Ground offset between the TPD12S016 ground and the ground of devices on port A of the TPD12S016 must be avoided. The reason for this cautionary remark is that a CMOS/NMOS open-drain capable of sinking 3 mA of current at 0.4 V will have an output resistance of 133 Ω or less ($R = E / I$). Such a driver will share enough current with the port A output pull-down of the TPD12S016 to be seen as a LOW as long as the ground offset is zero. If the ground offset is greater than 0 V, then the driver resistance must be less. Since V_{ILC} can be as low as 90 mV at cold temperatures and the low end of the current distribution, the maximum ground offset should not exceed 50 mV. Bus repeaters that use an output offset are not interoperable with the port A of the TPD12S016 as their output LOW levels will not be recognized by the TPD12S016 as a LOW. If the TPD12S016 is placed in an application where the V_{IL} of port A of the TPD12S016 does not go below its V_{ILC} it will pull port B LOW initially when port A input transitions LOW but the port B will return HIGH, so it will not reproduce the port A input on port B. Such applications should be avoided. Port B is interoperable with all I2C-bus slaves, masters and repeaters.

Resistor Pull-Up Value Selection

The system is designed to work properly with no external pull-up resistors on the DDC, CEC, and HPD lines.

REVISION HISTORY

Changes from Original (September 2011) to Revision A	Page
• Added Eye Diagram Using EVM Without TPD12S016 for the TMDS Lines at 1080p, 340MHz Pixel Clock, 3.4Gbps	17
• Added Eye Diagram Using EVM with TPD12S016 for the TMDS Lines at 1080p, 340MHz Pixel Clock, 3.4Gbps	17
<hr/>	
Changes from Revision A (October 2011) to Revision B	Page
• Updated Circuit Schematic Diagram.	4
• Added PW and RKT packages values for IO capacitance.	6
• Added LOAD SWITCH $I_{LEAKAGE_REVERSE}$ vs V_{5V_OUT} graph.	16
<hr/>	
Changes from Revision B (June 2012) to Revision C	Page
• Updated table formatting.	6
<hr/>	
Changes from Revision C (July 2012) to Revision D	Page
• Updated power savings options table.	3
• Clarified CLK pin orientation.	4
<hr/>	

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
TPD12S016PWR	ACTIVE	TSSOP	PW	24	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	PN016	Samples
TPD12S016RKTR	ACTIVE	UQFN	RKT	24	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	PN016	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
